

集装箱式供氧系统

应用

1. 医疗用途：连接呼吸机及麻醉机
2. 向医院供氧，连接医疗中心供氧
3. 可选增压泵：4-8 Bar (0.4 ~ 0.8MPa)

规范

1. 原理：变压吸附分子筛 (PSA)
2. 氧气流量：5(N)m³/h ~ 50(N) m³/h
3. 氧气浓度：93±3%
4. 出口压力：0.4 ~ 0.45MPa, 0.4 ~ 0.8MPa(当使用可选的增压泵时)
5. 功率：AC380V±5%，50/60Hz
6. 噪音：<85dB, <65dB (带可选降噪模块)
7. 功耗：~ 1.5kWh/m³
8. 净重：~ 6000kg(30 m³/h), ~ 9000kg(50 m³/h).流量较少，重量较轻。
9. 尺寸：6000 m×3000 m×2800 m

使用与安装

Containerized Oxygen Supply System

Application

1. Medical use: connect with ventilator and anaesthesia machine
2. Oxygen supply to hospital, connecting medical central oxygen supply
3. Optional Booster Pump: 4-8 Bar(0.4~0.8MPa)

Specification

1. Principle: Pressure swing adsorption of molecular sieve (PSA)
2. Oxygen Flow: 5(N)m³ /h~50(N) m³ /h
3. Oxygen Concentration: 93 ± 3%
4. Outlet Pressure: 0.4~0.45MPa, 0.4~0.8MPa (when use optional booster pump)
5. Power: AC380V ± 5%, 50/60Hz
6. Sound Level: <85dB, <65dB (with optional noise reduction module)
7. Power Consumption: ~1.5kWh/m³
8. Net Weight: ~6000kg(30 m³ /h), ~9000kg(50 m³ /h). Less flow, less weight
9. Size: 6000 m × 3000 m × 2800 m

Usage&Installation
